

**NASA's Multi-Mission Payload, Mission Specific
Evolved Expendable Launch Vehicle Secondary Payload Adapter
System Interface Specifications
For
Heliophysics Missions of Opportunity**

Initial Release

Effective Date: July 10, 2018

1 Introduction

1.1 Purpose

This document defines requirements and guidelines for a Rideshare Payload (RPL) for proposals submitted to the Heliophysics' Science and Technology Demonstration Missions of Opportunity that utilize the Evolved Expendable Launch Vehicle Secondary Payload Adapter (ESPA) Grande accompanying the Interstellar Mapping and Acceleration Probe (IMAP) mission.

This document was developed by NASA Science Mission Directorate (SMD) Heliophysics Division (HPD).

1.2 Scope

This document provides ground rules and assumptions for RPLs intended to launch on the IMAP ESPA Grande, as well as specific interface requirements and generic environment definitions that will not be formalized until the IMAP Launch Vehicle Provider has been selected and mission matures.

This document also includes Rideshare Mission Assurance (RMA)/Do No Harm (DNH) requirements that focus on ensuring safety of flight for the primary mission and other rideshare payloads.

Additional RPL requirements will be accommodated using the mission-specific or mission unique hardware processes, or services as specified by the Launch Vehicle to Payload Interface Control Document.

NOTE: For this document, the ESPA and the ESPA aggregator contractor are considered part of the Launch Vehicle (LV)/Launch Vehicle Contractor (LVC) and/or Government.

1.3 Definitions and Acronyms:

1.3.1 Acronyms:

- CCAMs – Contamination Control Avoidance Maneuvers
- CLA – Couple Loads Analysis
- DNH – Do No Harm
- DOT – Department of Transportation
- ESPA – Evolved Expendable Launch Vehicle Secondary Payload Adapter
- FEM – Finite Element Model
- HPD – Heliophysics Division
- IFD – In Flight Disconnect
- IMAP – Interstellar Mapping and Acceleration Probe
- I&T – Integration and Test
- IPS – Integrated Payload Stack – Fully integrated ESPA with mated RPL
- LSP – Launch Service Provider
- LSTO – Launch Service Task Order

- LV – Launch Vehicle
- LVC – Launch Vehicle Contractor
- PGAA – Performance and Guidance Accuracy Analysis
- RPL – Rideshare Payloads
- RMA – Rideshare Mission Assurance
- RUG – Rideshare Users Guide
- SMD – Science Mission Directorate
- TBD – To Be Determined
- TBR – To Be Resolved
- TBS – To Be Supplied
- VLC – Verification Loads Cycle

1.3.2 Definitions:

- Multi Mission Payload (MMP) are those payloads having equal rights on the mission.
- Rideshare Payloads (RPL) are those payloads that will have no authority to impact mission integration cycle for the primary mission. This includes but is not limited to go-no-go call for launch and drive environmental conditions within the fairing.

2 Documents

2.1 Applicable Documents

- AFSPCMAN 91-710 Range Safety User Requirements Manual Volume 3 – Launch Vehicle, Payloads, and Ground Support Systems Requirements
- NPR 8715.6 NASA Procedural Requirements for Limiting Orbital Debris
- NASA-STD-6016 Standard Materials and Processes Requirements for Spacecraft

2.2 Reference Documents

- EELV RUG Evolved Expendable Launch Vehicle Rideshare User's Guide (SMC/LE)
- TOR-2016-02946 Rideshare Mission Assurance and the Do No Harm Process – Aerospace Report
- GSFC-STD-7000 General Environmental Verification Standard (GEVS) for GSFC Flight Program and Projects
- MMPDS Metallic Materials Properties Development and Standardization
- MIL-HDBK-5 Military Handbook 5, Metallic Materials and Elements for Aerospace Vehicle Structures
- EELV SIS Evolved Expendable Launch Vehicle Standard Interface Specification

- LSP-REQ-317.01B Launch Services Program Program Level Dispenser and CubeSat Requirements Document
- MIL-STD-1540C Military Standard Test Requirements for Launch, Upper-Stage, and Space Vehicles
- NASA-STD-8719.24 NASA Expendable Launch Vehicle Payload Safety Requirements

3 Ground Rules and Assumption

3.1 The Government and/or LVC will provide the following:

- 3.1.1 In a case where a RPL is not able to meet the required mass properties, milestone schedule, or is determined by NASA to be unfit to launch, then NASA has the right to replace the RPL with an equivalent mass simulator or with a backup RPL if available. Note, mass simulators will be hard mounted to the ESPA Port (non-separating).
- 3.1.2 NASA will provide mass simulators as Government Furnished Equipment (GFE) for each ESPA port.
- 3.1.3 LVC will coordinate RPL deployment time and sequencing with all invested stakeholders.
- 3.1.4 LVC will perform a separation analysis to validate no contact between RPLs, upper stage and primary payload and demonstrate no impediment to the upper stage Contamination Control Avoidance Maneuvers (CCAMs) until RPLs activates propulsion systems.
- 3.1.5 LVC will provide Orbital Parameter Message when RPL deployment signal is sent from the LV.
- 3.1.6 LVC will provide the RPL separation signal (primary and redundant) to each RPL or to an ESPA sequencer.
- 3.1.7 LVC will provide confirmation of RPL separation/deployment over interleaved telemetry.
- 3.1.8 LVC may provide accommodations for RPL GN2 purge systems from RPL arrival at integration facility through launch.
- 3.1.9 NASA will provide the separation system as GFE for each ESPA class RPL per section 3.2.5.
- 3.1.10 NASA will provide In Flight Disconnect (IFD) as GFE to each ESPA class RPL per section 5.3.2.

- 3.1.11 Facility space will be provided at the ESPA aggregator. It can be used by RPLs for receiving, unpacking, functional checks, battery charging, and facility power.
- 3.1.12 ESPA aggregator and LV integration facility's temperature and humidity will typically be controlled to the following levels:
 - Temperature: 60° – 80° Fahrenheit (15.6° - 26.7°Celsius)
 - Relative humidity: < 65%
- 3.1.13 Clean room environment will be provided for integrated Contamination Control Environments to meet contamination requirement for primary mission.
- 3.2 RPLs will not have the authority to make a GO, No-GO call on day of launch.
- 3.3 RPLs will have no authority to change launch readiness date of Primary mission.
- 3.4 At a minimum, the RPL will be required to provide the following data products to meet the Primary Mission Integration Cycle. See Appendix A for a general guideline of Primary Mission Integration Cycle for rideshare.
 - Computer-Aided Design (CAD) Model
 - Finite Element Model (FEM)
 - Thermal Math Model (TMM)
 - Venting Model
 - Official Mass Properties Data
 - Safety Data Package
 - Test Procedures
 - Separation Systems Characteristics
 - Slosh Model (if applicable)
- 3.5 RPLs will need to meet Primary Mission Integration Cycle (e.g., PGAA-1, 2, 3, and Verification Load Cycle (VLC)). See Appendix A for a general ESPA rideshare integration schedule.
- 3.6 RPL will have no physical access post fairing encapsulation; this includes launch delays/scrubs.
- 3.7 No down range telemetry support will be provided for RPL deployments.
- 3.8 **All RPLs will be deployed after the Primary mission deployment.**

4 Rideshare Mission Assurance and Do-No-Harm

As Rideshare missions become more feasible and accepted in today's space and science industry, there is a growing need to mitigate risks from the RPLs to the primary mission and all payloads on the mission. The Department of Defense (DoD) Space Test Program (STP) has implemented a hybrid system of risk mitigation called Rideshare Mission Assurance (RMA). The objective of the RMA process is to provide all mission partners with a degree of certainty that all payloads included on a mission will do no harm (DNH) to each other, or to any operational aspect of the launch. The DoD STP developed a Rideshare Mission Assurance Do-No-Harm (TOR-2016-02946) guideline document.

This document is only releasable to Government and Government contractors and will not be in the program library.

The RMA process mitigates risks by assessing each payload flying on a mission against a tailored set of criteria, known as “Do No Harm” criteria. The primary concern of the RMA process is to ensure that the payloads are robust enough to survive the environments experienced during launch and/or will not inadvertently power on, and perform functions that could be harmful. Other areas also assessed includes any co-use of facilities during the launch campaign and the critical function inhibit scheme utilized by the payload. The focus of this process is to ensure safety of flight for all mission partners and is not to ensure mission success for individual RPLs. It is the responsibility of the RPLs to ensure their own mission success.

This document incorporates key elements of the RMA process for this early procurement and concept development phase. Once the LVC is on contract, this process will be formalized and a detailed mission specific set of Do-No-Harm criteria will be developed and validated as part of the overall mission integration cycle.

5 Requirements:

5.1 Mission Trajectory:

At this stage in the IMAP mission development, the trajectory and RPL orbit insertion are still to be determined, therefore RPL should consider a range of orbit insertions from:

$$C3 = -0.59 \text{ to } -0.57 \text{ km}^2/\text{s}^2$$

The declination and right ascension directions will be determined by the primary spacecraft, which is targeting a transfer orbit to a Sun-Earth L1 Lissajous Orbit.

The LV will perform a disposal burn following primary spacecraft separation, so this final burn could be utilized to achieve an escape trajectory ($C3 = 0$ or $C3 > 0$) for the RPL.

- 5.1.1 The RPL orbit insertion shall be designed not to make physical contact with the primary spacecraft, or LV performing end of mission operations. Its target, including C3, will be dependent on excess capability of the launch vehicle after inserting the primary spacecraft.

5.2 Mechanical

5.2.1 Reference Coordinates and Origin

5.2.1.1 RPL will use the coordinate system specified in Figure 5.1.

Figure 5.1 ESPA and RPL Coordinate System

5.2.2 ESPA Grande Class Payloads Interface Requirements

5.2.2.1 RPLs shall not exceed the mass and volume requirements as specified in Table 5.1.

Table 5.1 ESPA RPL Mass, Volume Interface Requirements

| ESPA | Max RPL Mass | Allowable RPL Volume | RPL Interface |
|------------------------------|--------------|--|---------------|
| ESPA 5 Port (PN: 5-24-42) | 320 kg | 42"x46"x38" ^(1, 2, 3, 4) Y, X, Z | 24" circular |
| | | | |

- (1) This assumes a 4-meter fairing.
- (2) 2" x 2" dynamic clearance stay-out zone on the inboard vertical corners of the allowable volume are shown in Figure 5.2.
- (3) The Atlas V 4m fairing has additional fairing sweep stay-out zones at the base of the fairing that may be applicable to the IMAP mission. These are defined in the LV users guide see link below:
<https://www.ulalaunch.com/docs/default-source/rockets/atlasvusersguide2010.pdf>
- (4) RPL X-axes volume does not consider the separation system width.

Figure 5.2, RPL Volume Stay-Out Zone

5.2.2.2 RPLs shall maintain a center of gravity as follows:

- CG along the RPL X-axis shall be less than 20" from the ESPA interface port
- Lateral CG (Y, and Z axis) shall be within 1" of the RPL X-axis centerline (TBR)

5.2.2.3 RPLs shall have the ability to add ballast to spacecraft. The ability to ballast will help mitigate any impacts to the primary mission analyses.

5.2.3 ESPA Class Separation Systems:

5.2.3.1 NASA will provide the RUAG PAS 610S (24") Separation System as GFE. Specification for this separation system can be found at the following link.

https://www.ruag.com/sites/default/files/2017-01/PAS_610S_Separation_System.indd_.pdf

5.2.4 Static Loads

5.2.4.1 The peak line load across the ESPA/RPL interface shall not exceed 400 lb/in.

5.2.5 RPL Stiffness

5.2.5.1 RPLs shall have first fixed-free fundamental frequencies above 75 Hz constrained at the separation system interface plane.

5.3 Electrical Requirements

5.3.1 Electrical Power

5.3.1.1 RPLs shall be powered off from the time of integration through deployment.

5.3.1.2 RPLs shall incorporate a Remove Before Flight pin that cuts power to the spacecraft bus. This will be used during transportation and ground processing/integration activities.

5.3.2 Connectors:

- 5.3.2.1 LVC will provide one in flight disconnect (IFD) connector and one spare to each of the RPL developers for incorporation into spacecraft build. IFD commonly used in the RUAG PAS 610S Sep System is the DBAS 79 -12 pin connector.

5.3.3 Battery:

Battery charging can be provided through an ESPA T-0 connector. Battery charging will not be provided during integrated operation or hazardous operations. LVC will provide RPL telemetry for battery monitoring data up until Launch/T-0.

- 5.3.3.1 RPLs shall utilize Underwriter Laboratory (or-equivalent) approved batteries with no modifications and be compliant with Range Safety requirements (AFSPCMAN-91-710).
- 5.3.3.2 RPLs shall incorporate battery circuit protection for charging/discharging to avoid unbalanced cell condition.
- 5.3.3.3 RPLs shall meet battery charge monitoring requirements per AFSPCMAN 91-710. RPL monitoring of the charge activity will be required to avoid generation of Radio Frequency (RF) emissions that may affect nearby hardware.

5.4 Environments:

This section contains general requirements for early development/design because mission-specific environments have not been defined. Mission specific environments will be defined once the launch vehicle contractor and primary observatory have been selected and the IMAP mission integration cycle has begun. These Mission specific environments will be flowed down to the RPLs from the Launch Vehicle to IMAP Interface Control Document (ICD). The environments defined in the LV to IMAP ICD will take precedence over the requirement defined in this section.

5.4.1 Thermal

- 5.4.1.1 RPLs shall not specify any specific temperature and humidity requirement.

5.4.2 Random Vibration

- 5.4.2.1 RPLs shall be designed to the random vibration environments defined in Appendix B.

5.4.3 Sine Vibration

- 5.4.3.1 RPLs shall be designed to the sine vibration environments defined in Appendix B.

5.4.4 Acoustics

- 5.4.4.1 RPLs shall be designed to the acoustic environments defined in Appendix B.

5.4.5 Shock

- 5.4.5.1 RPLs shall be designed to the acoustic environments defined in Appendix B. ESPA separation plane shock environment is based on LV users guides interface levels attenuated 2 joints to the ESPA rideshare interface.

5.4.6 Pressure

5.4.6.1 RPLs shall demonstrate compliance with pressure decay rate during LV ascent.

5.4.7 Contamination

The IMAP spacecraft is highly sensitive (ISO Level 7 (Class 10,000) contamination control) to both molecular and particulate contamination. As a result, strict cleanliness requirements must be placed on secondary payloads and will be documented in the LV to IMAP ICD. Surfaces within the fairing volume shall meet the IMAP requirements unless proven through contamination transport analysis to not pose a contamination threat to the IMAP observatory.

5.4.7.1 RPLs shall be cleaned, certified and maintained to level 500A per IEST-STD-CC1246.

5.4.7.2 RPLs shall undergo thermal vacuum bakeout per ASTM E2900.

5.4.7.3 RPLs material selection shall be in accordance with NASA-STD-6016 Standard Materials and Processes Requirements for Spacecraft.

5.4.8 Electromagnetic Interference/Electromagnetic Compatibility (EMI/EMC)

5.4.8.1 RPLs shall not conduct free radiation during launch processing. "Plugs out" testing may be conducted with antenna hats.

5.4.8.2 RPLs shall ensure Underwriter Laboratory (UL) or equivalent certification on all electrical ground support equipment (EGSE).

5.4.8.3 The RPLs radiated emissions at the payload interface plane shall not exceed the levels shown in Figure 5.3.

Figure 5.3, Spacecraft Radiated Emissions

- 5.4.8.4 The RPLs shall be compatible with the launch vehicle and Range radiated emissions as shown below:

| | |
|---------|---|
| 20 V/m | 2 MHz to 18 GHz |
| TBD V/m | TBD \pm TBD MHz (launch site and launch vehicle telemetry transmitters) |

- 5.4.8.5 The RPLs shall meet the following EMI margin requirements:

- 5.4.8.5.1 Electroexplosive Devices (EED) - The RPLs shall demonstrate a 20 dB Electro- Magnetic Interference Safety Margin (EMISM) to the RF environment (vs. dc no-fire threshold) for all EED firing circuits.
- 5.4.8.5.2 Safety Critical Circuits - The RPLs shall demonstrate a 6 dB EMISM to the RF environment for all safety critical circuits and circuits that could propagate a failure to the launch vehicle.
- 5.4.8.6 RPLs shall be magnetically clean from encapsulation through separation on orbit, with magnetic fields less than or equal to 1 Gauss at 1 meter from the RPL and all ground support equipment (GSE).

5.4.9 Radiation

- 5.4.9.1 No hazardous radiation is permitted.

5.5 Ground Operations

- 5.5.1 RPLs shall provide GSE lifting fixtures to support mate operations onto the ESPA.
- 5.5.2 RPLs shall provide their own GSE.

5.6 U-Class Containerized (CubeSat) RPLs Requirements

- 5.6.1 RPLs proposing U-Class payloads shall provide their own flight qualified dispenser system that meets the requirement of this specification. The dispenser system will be hard mounted to the ESPA Port.
- 5.6.2 U-Class Containerized (CubeSats) RPLs shall meet the requirement of this specification, except for sections 5.2.1, 5.2.2, 5.2.3, 5.2.4, 5.2.5, 5.3.2.

6 Safety

6.1 Fault Tolerance

- 6.1.1 All inhibits to hazardous operations (such as deployments of deployables, RF transmission and propulsion activation) shall be dual fault tolerant. (TBR)

6.2 Hazard System activation

- 6.2.1 RPLs shall have the ability to activate hazardous systems based on time limit identified in the LV to IMAP mission ICD. These hazardous systems may consist of, but are not limited to:

- Deployments of solar arrays, booms, and antennas etc.

- RF transmission
- Propulsion system
- Any other systems

6.3 Propulsion and Pressure vessels

- 6.3.1 RPLs with pressure vessels shall comply with Range Safety (AFSPCMAN-91-710) standards and be DOT certified.
- 6.3.2 RPLs shall comply with Range Safety (AFSPCMAN-91-710) standards and be Department of Transportation (DOT) for Loading, offloading (contingency Operations) and transportation of hazardous propellants.

6.4 Hazardous Materials

- 6.4.1 RPLs hazardous material shall conform to AFSPCMAN 91-710, Range Safety User Requirements Manual Volume 3 – Launch Vehicles, Payloads, and Ground Support Systems Requirements and be DOT certified.

6.5 Orbital Debris

- 6.5.1 RPLs mission design and hardware shall be in accordance with NPR 8715.6B NASA Procedural Requirements for Limiting Orbital Debris and Evaluating the Meteoroid and Orbital Debris Environments.

Appendix A - General Guideline of Primary Mission Integration Cycle

| General Timeline | | | |
|--|-------------------------|---------------|--|
| Rideshare Activity | General Timeline | Source | Comment |
| Release Final LSTO | L-44 | LSP | ESPA Req. Included |
| Early CLA for Spacecraft CDR (pre selection CLA) | L-40 | LV Prog | Include ESPA with mass simulators |
| LSTO Proposals Due | L-42 | LV Prog | |
| Launch Vehicle Selection | L-36 | HQ | |
| Perform Preliminary Loads Cycle (CLA #1) | L-33 | Prog | Assess envelope potential range of ESPA payloads |
| Initial ESPA FEM | L-28 | RUG | Initial ESPA FEM |
| Mass Simulators delivered to ESPA I&T facility | L-24 | Prog | Support ESPA Test verified FEM with mass simulators |
| Perform Final Loads Cycle (CLA #2) | L-24 | LV Proc | This analysis must envelope all potential configurations for the secondary payloads to establish bounding CLA levels for Primary prior to environmental test |
| Approval of RS P/L Inclusion | L-18 | RUG | Final date to add RPLs |
| Finalize the mass of the Rideshare Payloads | L-14 | Prog | |
| RPL provide test verified FEM | L-12 | Prog | Last update to ESPA for FEM |
| Verification CLA (VLC) (CLA #3) | L-12 | LV Proc | |
| Updated Trajectory Study (3 of 4) | L-12 | LV Proc | |
| Rideshare P/Ls delivered for P/L-to-ESPA I&T | L-4 | RUG | |
| ESPA w/ P/Ls delivered for ESPA-to-L/V I&T | L-2 | RUG | |
| Final Trajectory Study (4 of 4) | L-1 | LV Proc | |
| Launch | ILC | | |

Appendix B – Environments

Random Vibration Environment
